

protein2GO Transition

- Already using Protein2GO
 - human, Dictybase, AgBase
- All (or nearly so) protein-coding genes in UniProt:
 - Wormbase (right now)
 - TAIR, SGD (by APRIL)
 - EcoCyc/PortEco, Flybase, (Pombase?) (within the year)
- Many protein coding genes not in UniProt:
 - mouse, zebrafish, rat
- A fundamental change in annotation data flow

LEGO support

- Subsumed under LEGO working group
- UI for annotators TBD, but Tony (Mr. protein2go) is part of the LEGO working group
